PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience in front-end development, now pursuing an MSc in Artificial Intelligence. Passionate about leveraging AI and machine learning to enhance user experiences and optimize system performance. Skilled in React JS, JavaScript, and Python, with hands-on experience in automation, data-driven applications, and AI integration. Eager to apply AI techniques to real-world challenges.

SKILLS

Programming & Development: Python, JavaScript, TypeScript, Node.js, Express.js, Core Java
Front-End Technologies: React JS, Next JS, HTML5, CSS3, Material UI, Bootstrap, Redux
Back-End & Databases: MySQL, MongoDB, RESTful APIs
DevOps & Cloud: Docker, CI/CD (Jenkins, GitHub Actions)
Testing & Automation: Jest, Mocha, Playwright, Postman
Project Management & Tools: Agile, Jira, Figma, Git, Canva
Others: AI & Big Data

WORK EXPERIENCE

AI - Software Engineer *Louis Charles International LLC FZ, Dubai* **Aug 2025 - Present**

- Developed and launched the official public website for the business: https://louis-charles.com
- Developed and launched the official website for the business: https://www.quickcashdirect.com/
- Building a SaaS-based CRM to manage leads for IVA (Individual Voluntary Arrangement) services.
- Implementing an AI-driven internal voice calling system by training on existing business data to enhance communication and efficiency.
- Automating the user journey through WhatsApp workflow and AI-powered conversations, cutting response time by 60% and improving lead engagement.

Intern - Full Stack Developer *Decarbeon, Dubai* **Feb 2025 - April 2025**

- Developed dashboards for sustainability metrics using **Next.js** and **Chart.js**.
- Built a short-term web app using **WordPress** for content delivery.
- Collaborated on data visualization of energy consumption and carbon footprint.
- Applied AI understanding to support insights and reporting modules.

Associate Software Engineer *New Relic, Hyderabad* **Feb 2023 - Mar 2024**

- Built reusable components for performance monitoring, cutting load times by 25%.
- Designed a domain validation landing page, increasing engagement by 35%.
- Led QA automation using **Playwright** and **Jest**, resulting in zero critical bugs post-launch.
- Streamlined deployment workflows, reducing configuration time by 40%.

Junior Level Engineer *XRG consulting pvt ltd, Hyderabad* **Sept 2021 - Jan 2023**

- Developed a Java-based backend service for user invitations, reducing manual follow-ups by 40%.
- Created a React JS modal for team invitations, enhancing user engagement.
- Documented API workflows using Swagger, reducing onboarding time.

Internship trainee *Manac Infotech pvt ltd, Hyderabad* **Mar 2021 - Aug 2021**

- Gained hands-on experience in HTML, CSS, JavaScript, and web development principles.

EDUCATION

MSc Artificial Intelligence |*Part time - Expected Dec 2026*
Heriot-Watt University, Dubai, United Arab Emirates.
Relevant Coursework: Machine Learning, Deep Learning, Computer Vision, NLP, Intelligent Agents

Bachelor of Technology | Computer Science & Engineering - *2021*
Keshav Memorial Institute of Technology, Jawaharlal Nehru Technological University, Hyderabad.

PROJECTS

Website Performance Monitoring tool
- Designed a **React**-based monitoring product, optimizing load times and user experience.
- Built **reusable components** for enhanced efficiency across multiple projects.
- Link : https://one.newrelic.com/website-grader

Instant Observability page
- Developed a public landing page using **React** and **Next.js**, integrating third-party links for seamless accessibility.
- Ensured consistency with **Material UI** and **Bootstrap** for a responsive UI.
- Link: https://newrelic.com/instant-observability

Playwright Automation for User Management
- Created **Playwright** test cases and **Jest** unit tests to validate UI components.
- Improved reliability and code quality with automated testing.

Team Invitation service
- Developed a **Java**-based backend service for user invitations, reducing admin effort.
- Built a **React**-based UI component for seamless team management.

MediConnect360 – AI-Powered Hospital Management System
- Built a **hospital management system** with **Node.js, Express.js, MongoDB, and Docker**.
- Integrated an **AI chatbot** for patient inquiries and appointment scheduling.
- Implemented **CI/CD pipelines, version control, and Jenkins** for automated deployment.

AI-Driven Crop Recommendation and Disease Detection
- **Crop Recommendation:** Predicts optimal crop selection based on soil nutrients (N, P, K) and climate parameters (temperature, humidity, pH, rainfall).
- **Disease Detection:** Classifies plant diseases from leaf images across 38 disease classes using deep learning.
